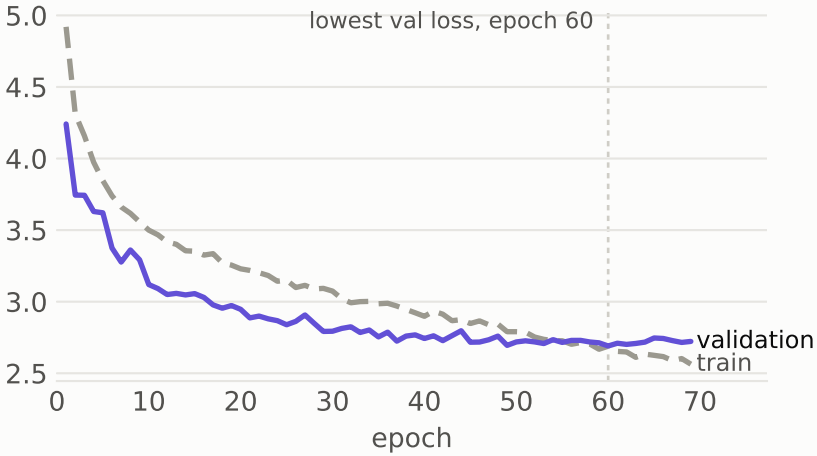
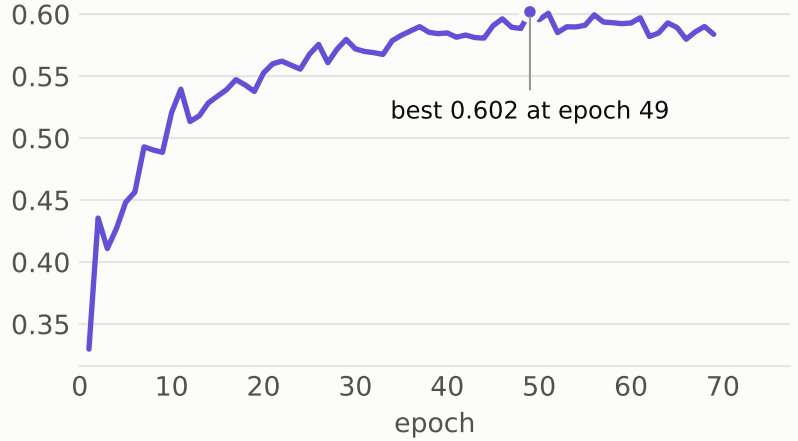
Training curves, measured from each run's results.csv

Dashed gray is training loss, violet is validation. The step in the pen run's training loss near epoch 30 is where mosaic augmentation switches off for the last epochs, so it is not a sign of learning the training set.

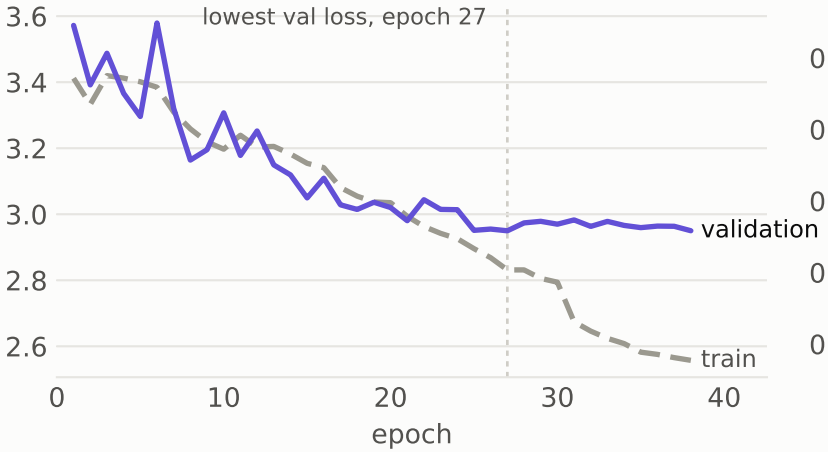
Close-up model (dropping4-laptop)
Loss (box + class + distribution), lower is better

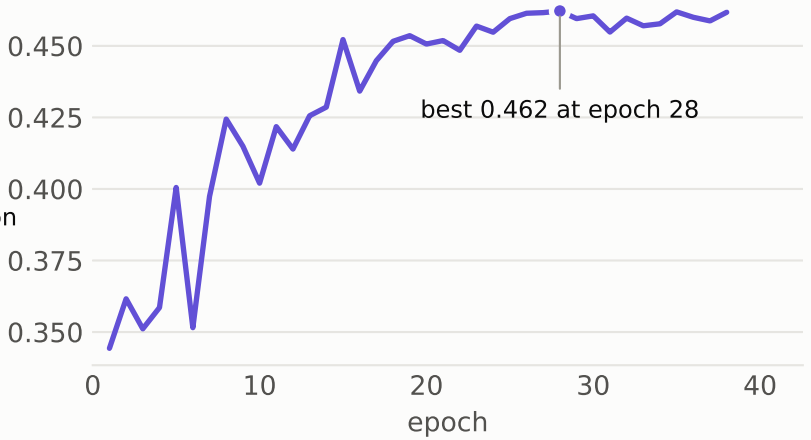


Validation mAP50-95, higher is better



Pen-scale model (dropping4-pen)
Loss (box + class + distribution), lower is better





Validation mAP50-95, higher is better
